

The MAD ROBOT supports a variety of target types. While many of our customers have their own vendors for targets, USAI offers a selection of targets for your convenience. Each type requires a Target Mounting Adapter to attach the target to the Target Mounting Post. See the **Target Mounting Adapters** data sheet for more information.

3D POLY FOAM

These life-size, realistically colored targets are made of rugged urethane foam. They mount to the MAD ROBOT using the **DSP** Target Mounting Adapter. There are six styles to choose from. The basic target consists of a torso and head as shown. The torso or head can be replaced separately as required. Accessories are available separately, individually or in the Accessory Kit. These targets can take up to 2500 rounds before requiring replacement.

Nub Tom Char Ken Hilary Burt

Patching compound is available in seven colors for to fill holes for a refreshed look.

The Accessory Kit provides nine interchangeable items to help create threatening and non-threatening scenarios.

3D POLY VINYL

These targets are life-size and anatomically accurate (front and back). The resilient poly vinyl material makes these targets appropriate for knife and baton training as well as less-than-lethal ammunition. There are two styles available: large and medium size.

The 3D Poly Vinyl targets mount to the MAD ROBOT with the **TMP** Target Mounting Adapter. The targets can take 1000 to 2000 rounds depending on caliber and placement.

PAPER

Because of the wide variety of paper target styles and their holders, it is not practical to provide a listing. On your request, USAI will provide a quote for your specific target style and holder.

The Target Mounting Adapter normally used with a paper target and holder is the **UTM**.

3D PLASTIC BODY

These molded plastic targets are life-size (5'10" tall) and fully 3-dimensional. The movable joints allow them to be placed in a variety of positions for various scenarios. The **SLP** Target Mounting Adapter is used with these targets. A complete target (MR-T-3DPB-TC) includes a Male Head, Torso, Arms and Legs. The various components are available separately so you may replace parts only as needed. Accessory weapons are also available.

3D PLASTIC 1/2-SHELL

These life-size targets are made of a durable plastic polymer. The head and torso are molded together. They are the most economical 3D targets available. While they do not provide a realistic rear view, they do facilitate recording hits with paper targets placed inside.

This target uses the **SLP** Target Mounting Adapter.

Clothing may be added for additional realism.

When you purchase your targets from United Service Associates, Inc. we make any necessary modifications required for our adapters. We can also supply custom adapters for your targets.

The adapters and clothing shown are for illustration only. They are not included with the Targets.
